Predicting Network Congestion in the Era of 5G, Cloud, and SDx

The latest version of DX NetOps 20.2 delivers next-gen high-scale operations monitoring that simplifies 5G, IoT, Cloud and SD-WAN deployments by applying AI and ML to rich granular network data captured at the chip level via telemetry and enables a unique automated AI-driven solution that remediates network congestion.

Discover the Next Generation of DX Application Performance Management

With the increased complexity of today's modern applications and the growing need to deliver a near-flawless customer experience - traditional APM solutions often fall short in delivering the visibility needed to fix problems before they impact the end user. Instead, APM solutions must evolve to include AIOps capabilities to spot anomalies earlier, predict behavior, and enable informed automatic corrective actions.

Introducing Automic Automation for AIOps with Site Reliability Automation

We are thrilled to announce Automic Automation for AIOps. Available as SaaS and tightly integrated with AIOps from Broadcom, it introduces innovative, intelligent automation capabilities that enable IT Operations and Site Reliability Engineering (SRE) teams to move from reactive and error-prone manual remediation to proactive automated remediation. The solution enables Site Reliability Automation by providing intelligent remediation recommendations and out-of-box workflows to help create more resilient production environments, streamlining SRE initiatives.
