

## Symantec Network Security Newsletter

September 2020

### New Product: Secure Web Gateway platform

Symantec has delivered new, **Secure Web Gateway** appliances that separate the traditional appliance into individual hardware and software components. The new hardware is now available and new enterprise licensing provides you with cost savings and allows you to deploy as you see fit: on-premises, in the cloud or a blended solution. This new advanced hardware will replace current Symantec ProxySG and Reverse Proxy appliances. Learn more about the latest innovations of the new Secure Web Gateway platform.

### Why Upgrade to the new Secure Web Gateway platform

Compared to the previous S-Series appliances, the new hardware platform offers significant performance improvements, deployment flexibility, greater scalability and cost savings. With the new Enterprise licensing, customers can use the same license and choose how you deploy the software – on-premises, as a virtual appliance, or in the cloud. In conjunction with the new offerings, an End of Life (EOL) **notification** was issued for the current S200/S400/S500 Proxy, MACH5, Standard Reverse Proxy, and Advanced Reverse Proxy hardware appliances. The EOL policy ensures you will continue to receive support as outlined in your specific agreement to enable you to easily migrate to the new platform. Review the notification and learn more about why to upgrade.

### Live Now: Splunk Apps Available to Customers

Symantec's integration via Splunk Apps provides a clear dashboard for security operations allowing rapid investigation for advanced persistent threats. Symantec for Splunk Apps are currently available for: Integrated Cyber Defense Exchange (ICDX), Email Security.cloud, ProxySG, Web Application Firewall (WAF), Web Security Service (WSS), and **Endpoint Detection & Response (EDR)**. Apps were tested on Splunk Enterprise 6.5.0 or later.

### Email Security.cloud: Migration Update to Google Cloud

Symantec's integration into Broadcom has presented operational and business opportunities that we are eager to embrace. These opportunities will enable us to sharpen our focus on what we do best, which is delivering industry leading security software and services for our customers, especially in the cloud. To help accelerate our cloud roadmap and strengthen integrations within our portfolio, we will consolidate our cloud environments into a single platform. Find out now about the benefits of operating from a common platform and check out the FAQ.

### Making it simpler to buy Email Security

One of the operational improvements the Email team has made is to dramatically reduce the number of Email Security license types we offer. Across the Email Security.cloud and Symantec Messaging Gateway (SMG) products, the number of SKUs on offer has reduced by 99%, moving from around 3,200 license options, to now just under 30. We have consolidated a large number of license options to make it simpler to bundle important add-ons to our core email security licenses. This change makes it easier for customers (or their technology partners) to select and purchase the most appropriate license. For example, we offer a license that includes both our cloud service and on-premises SMG appliance in a single bundle.

### Symantec WebFilter EOL announcement

Broadcom is announcing that Symantec WebFilter (formerly known as Blue Coat WebFilter or BCWF) will reach end of life August 31, 2023. Customers using WebFilter today will be able to continue to renew and add capacity to their service until August 31, 2022. This lifecycle adjustment will help customers take advantage of Symantec's next-generation web intelligence technology: Symantec Intelligence Services. Symantec Intelligence Services contains all of the functionality of WebFilter plus new features such as: Risk Levels, GeoIP Location, CASB Applications. What's more, Symantec Intelligence Services Standard maintains the same cost as WebFilter.
